SUBUL IN-FUEL WATER DETECTION PASTE

This description gives information about a product used for water detection in fuel tanks and how to use it. The product is used to detect water in the tank, and the paste applied to the dipstick touching the bottom of the tank turns red all the way to where the water is. The product is produced with chemicals that will not harm humans and other living things, but in case of contact, eyes should be washed with plenty of water and occupational safety rules should be followed. Additionally, the use of the Mites foldable measuring stick, which is a measuring stick for the use of the product, is recommended and detailed information of this product is available on the website.

Product No: TDR2000000297
