MITES STEAM RECYCLING COMPOSITE HOSE - BGD HOSE - 5 METERS

While carrying gasoline in fuel tankers produced in accordance with ADR, that is, "Regulation on the Transport of Hazardous Substances by Road", no vapor is released into the atmosphere until it reaches the fuel station from the filling facility. In order to prevent the vapor from mixing with the atmosphere while discharging gasoline into the underground tank at the gas station, this hose is connected to the Mites MVR Vapor Recycling Adapter located in the tanker and the underground tank breather. BGD Hose is produced with a special aluminum connection head of 3" and 5 meters, with two ends of 4". Please contact us for special quantity requests. <video muted="" controls="controls" width="500" height="500"> <source src="https://www.mites.com.tr/wp-content/uploads/2023/0
