FUEL TANKER DRAIN ELBOW - 3X4 INC

Our product, also known as Filling Elbow, is produced for discharging fuel from fuel tankers to underground tanks. The locking tabs of our elbow, which is made of first quality aluminum, are made of spark-free bronze material in accordance with ATEX. In mass production, the inlet connected to the hose coming from the tanker is 3", and the outlet connected to the underground tank is 4". Both sides can be produced as 4" specifically for the order, or the desired inlet and outlet size can be provided with different equipment. All gaskets are made of Viton material. It has a transparent sight glass so you can monitor the amount and continuity of fuel flow.

Dimension (LxWxD): 530x180x300mm
