DEFBOY BASIC ADBLUE PUMP

DEFBOY is a product specially produced for above-ground adblue tanks used in industrial areas to work in harmony with fuel automation. It was developed thanks to Mites' experience in the sector and MLB Group's engineering know-how. Thanks to its RS 485 output, it works compatible with fuel automation systems. However, it is worth noting that DEFBOY is not an adblue sales pump produced by Mites. Mites AdBlue Sales Pump 220V - 40L model, which is a product specially designed for Adblue sales, should be preferred. DEFBOY is not a suitable product for AdBlue trading and is stated as "cannot be used in trading". Please call for different efficiency and equipment options.

Model:	111 - 1 Item, 1 Gun, 1 Yield
Flow (QMin-QMax):	5-50 L/min (5-90 L/min - 10-130 L/min options are optional)
Ambient Operating Temperature:	-25°C / +55°C
